

**LogSentinel helps a
large government
agency with
detecting security
incidents**

Business challenge

Security incidents, including cyberattacks, are often hard to detect and require a combination of expensive, well-configured and integrated tools.

Having undetected and unaddressed security incidents may invite additional attackers and become a growing organizational vulnerability over time.

Solution

SentinelTrails is integrated with the internal applications, databases and web services of the agency to monitor all **audit logs**. Many security incidents involve anomalous activity within these systems.

With our intuitive dashboard as well as **rule-based an AI-based anomaly detection**, the agency was able to detect and resolve numerous security incidents.

Key **Benefits**

01

DETECTION

Intuitive UI, rule-based and AI-based anomaly detection allows easily identifying security incidents in real time

02

VISIBILITY

The IT department now has full visibility on the user and system behavior inside the organization as well as any deviations from the norm

03

RESILIENCE

Being able to address security incidents in a timely manner makes the organization more resilient

About LogSentinel

LogSentinel is an innovative company that takes compliance and information security to the next level with cutting edge technologies

Audit trail

Store and analyze every business-relevant event

Anomaly detection

Detect fraudulent and other anomalous behavior by people and systems

Blockchain-protected

Immutable, secure and provable to 3rd parties

Full visibility

Gain full visibility over your IT stack, including legacy systems
