

**LogSentinel helps a
large utility provider
to monitor legacy
systems**

Business challenge

Legacy systems are dominating the IT ecosystem of large established companies. They usually lack to security and compliance features required by modern standards and regulations. Upgrading them is rarely an option and involves expensive projects.

Having full visibility on legacy system is a strong requirement for a regulated organization with **high security and compliance needs**.

Solution

LogSentinel SIEM is integrated with many legacy systems, either transforming their custom log formats into a secure and compliant audit trail or attaching directly to the underlying database to generate a relevant audit trail.

The flexible log collector module allows agent-based and agentless collection on a large variety of systems

Key Benefits

01

VISIBILITY

The ability to collect meaningful audit logs from multiple legacy systems allows visibility on user behavior that was impossible before

02

COMPLIANCE

The immutable audit log makes legacy systems compliant with various standards and regulations.

03

DETECTION

Anomaly detection on user behavior reduces the risk that usually comes from legacy systems

About LogSentinel

LogSentinel is an innovative company that takes compliance and information security to the next level with cutting edge technologies

Audit trail

Store and analyze every business-relevant event

Anomaly detection

Detect fraudulent and other anomalous behavior by people and systems

Integrity protection

Immutable, secure and provable to 3rd parties

Full visibility

Gain full visibility over your IT stack, including legacy systems
